Introduction & Concept

Covid - 19 Changed our lives in many way from lockdown to how we lives in public everything has been changed since pandemic started. From all these things the who worked very hard to prevent this pandemic was doctors and frontline health workers and undoubtedly many more. Doctor and his team got so many responsibilities from managing records of patient to take appointment and many more, if we go more particularly, we think managing appointment and records are hardest thing to manage and it's really time consuming too.
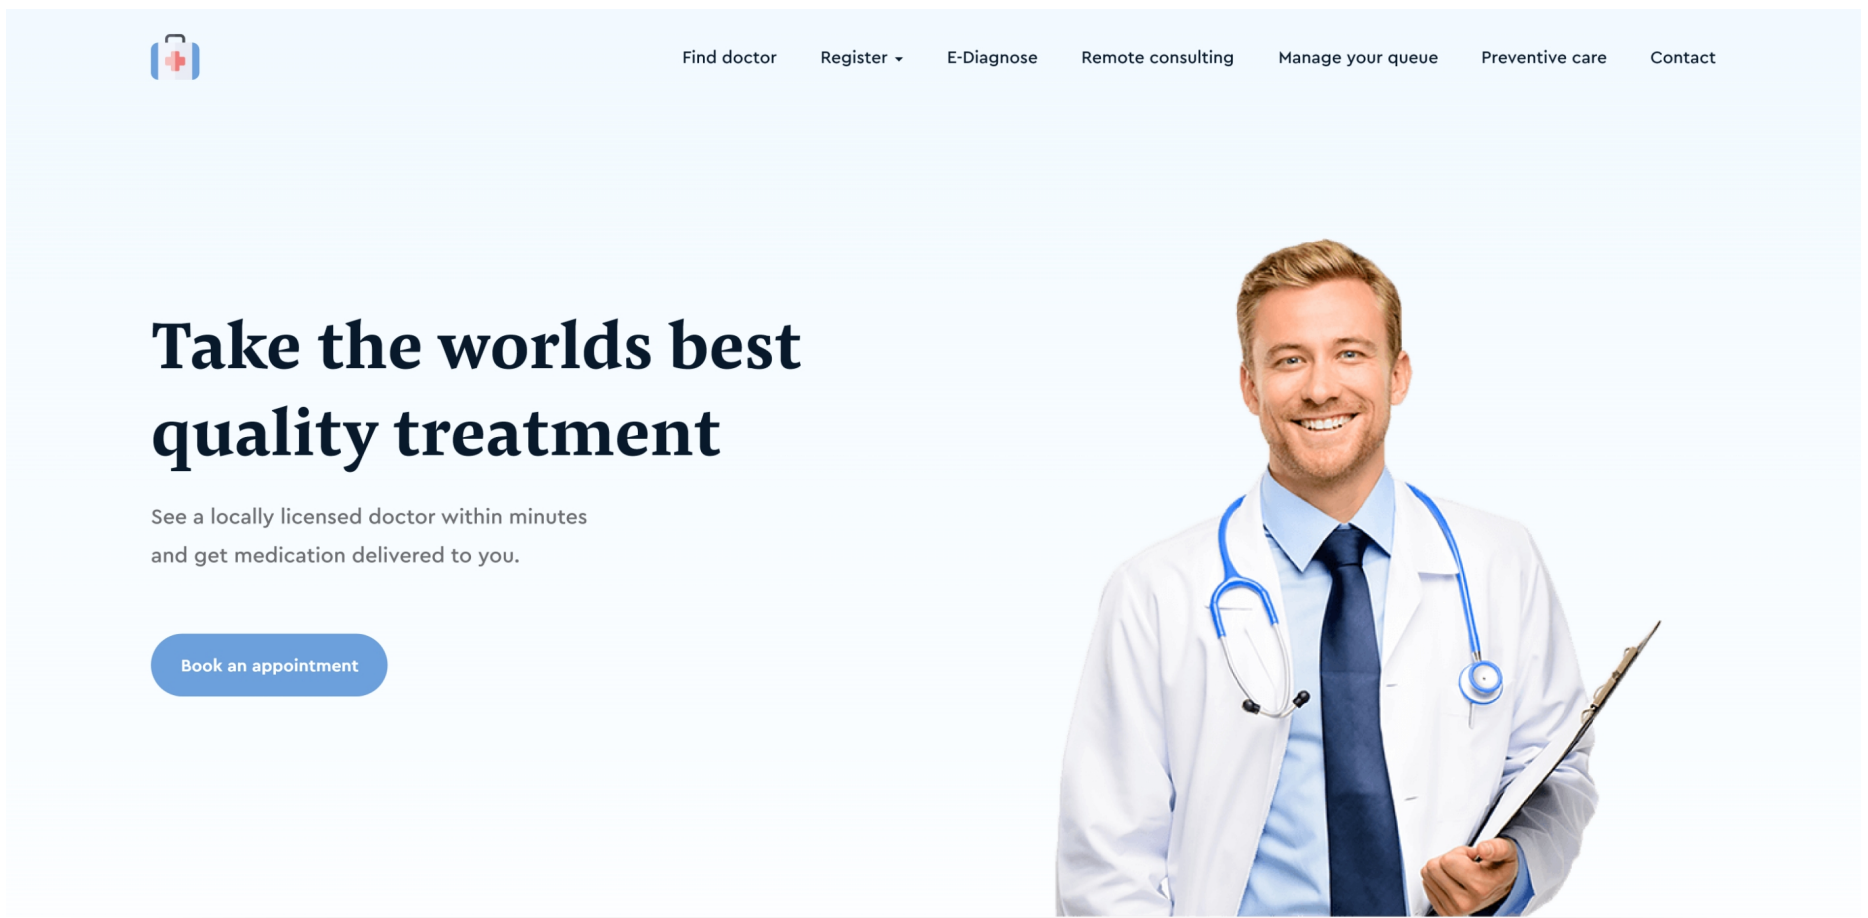

So We've decided to bring the evolution to this area through the product which we want to built for doctors and receptionist to manage appointment as well as keep records safe at the same time less time consuming.

We have collected data regarding this thing and it is astonishing that the doctors medical staff and associated people were not gone digital in these particular area till now.

We decided to take up this thing and made some initial product so doctor will get idea about how this product will work and what are the benefits for this thing.

So in next slides you will see our products and benefits to take your appointment process online and improve the customer experience and how this will leads to more customer.

How it will work ?

Find doctor   Register ▾   E-Diagnose   Remote consulting   Manage your queue   Preventive care   Contact

Take the worlds best quality treatment

See a locally licensed doctor within minutes and get medication delivered to you.

Book an appointment

So at first glance user will see website or small landing page of particular doctor or hospitals. If doctor is managing his clinic spontaneously then he or she can manage this thing by own or if they have got big hospitals and they are managing bigger staff then it manage accordingly.

So user will See the some glimpse of information of their respective doctors or hospitals which they want to take appointment. So it will be easier for user to find what they are doing and other stuff.

Afterwards introduction they will find who are the other doctors that provide their services In the particular hospital or particular clinic. It is quite often that Doctors do visits in different hospitals so in this section we will provide that thing.

So the people who manage hospitals and big clinics, it will be easier for him to manage all kind of things very easily. at the same time user can easily book appointment of their respective sectors. And for hospital they could able to manage all the appointments easily as well doctor information too.

How it will work ?

Our Specialities Service

Gynecologist	Orthopaedic	Dermatology	Ophthalmology
Sexologist	Paediatric	Dentist	Cardiology

In the third part of the website we will put which kind of services doctor provides and if they found relevant to that disease, then they can take appointment of as per their need.

if patient seeing doctor second time we will manage that thing through link or maybe we can make small 2 page application, it's depend on doctor how they want to manage all the things.

Reason For Appointment

Book an appointment

---

final and most important part from user side is booking appointment. We're thinking make this part more easy and convenient that any user who came first is able to book appointment without need of any other person.

We'd put patient name and mobile number, and these are the only fields we need. and the rest of fields are like type of service, date which he or she wants to book appointment and available time slots, and reason for appointment. We put only field that are must for avoid confusion for user.

Now we move forward to how doctor will manage all the appointments, cancelled appointments and past users.

How it will work ?

So last but not least thing is that how doctor or receptionist will manage user data, it's just glimpse though. when user book appointment through link, WhatsApp or through website receptionist will see that things here. from name of customer to date time and reason for appointment.

and what we are thinking is that if user book appointment then we will send you notification to respective doctor to avoid and future problem. so doctor whom user took appointment and receptionist will see the appointment detail. even though there are more things to consider in dashboard we just gave glimpse how all the things will manage.

We will explain you how this product increase patients and help to retain patients too. So move to next slide....

Benefits

Clients Convenienece

New clients will want to book an appointment with you once they know that you have made your booking process easy. If they are impressed with their meeting with you, they will keep coming to you for treatment.

Don't have to wait in queue

No patient wants to spend hours waiting to book an appointment when there are system online doctors out there who are offering equal service with a booking system that makes appointment scheduling quick and stress-free.

Retention and alert for patients

You will get all the details about your patients so you even follow up for that patient so it will help you to retain that patient, also patient will get alert of their respective appointment so he or she will not forget as like in call appointment.

Saves Employees and doctor time

you do not need your staff to ensure that bookings are done correctly. Your clients can go online and book appointments for themselves. Most importantly, it saves you and your staff time.

Management of Your Schedule

he online booking system puts you in control of your schedule and appointments. Now, you can organize your activities and plan ahead for the day without fear of last-minute cancellations on the part of clients.

User friendly

If you are worried that your client might find the online booking system difficult to use, relax! Most booking systems are easy to use and does not require any installation before clients can use them.

Conclusion

Finally,

Here is brief details of appointment management system, although this product will come with pre built features, we will rectify this things as per your business need and will make product suitable for you.

This management system will help your hospital or clinic to achieve exponential growth and might be make impact on profitability.
